

PRODUCT CODE 8047

SmartCare Salt Clean

SmartCare Salt Clean is a cutting-edge formula designed for fast and efficient penetration into brick/plaster surfaces ensuring swift removal of efflorescence from both vertical and horizontal surface. Its Pore Clean Technology causes rapid resurgence action which removes the unsightly efflorescence, salts, and alkali deposits, restoring the original beauty of your walls.

PRODUCT BENEFITS

For the removal of efflorescence from different substrates

- Instant Action on Efflorescence
- Heavy Duty Efflorescence Cleaner
- Pore Clean Technology targets hidden Efflorescence and Alkali deposits
- Works on both horizontal and vertical surfaces

asianpaints

No Added Lead, Mercury, Arsenic & Chromium

Lead content does not exceed 90 parts per million.

PRODUCT FEATURES

AVAILABLE PACKS

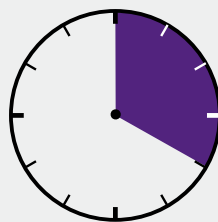

1Ltr

5Ltr

DRYING TIME TO RECOAT

3-4 HOURS

COVERAGE

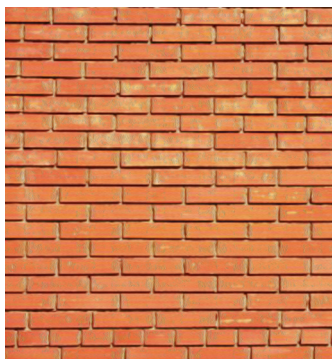

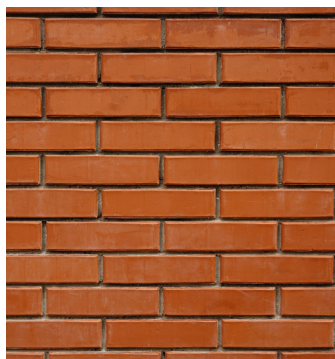

On bricks/ normal masonry surface by brushing

2 COAT
17-20 sq.ft/ltr**

**Actual coverage may vary from the quoted coverage due to factors such as method and condition of application and surface roughness and porosity.

RECOMMENDED USAGE

SmartCare Salt Clean can be safely used on all kinds of Bricks including Clay Tiles Chinese Bricks, Dachi Appa, Surkhi Applied Bricks, along with Plaster Surface, concrete blocks, facades, stucco, and pavers. The cleaner chemically breaks down and removes efflorescence, lime deposits, metal salt stains, and rust deposits. Typically recommended for brick, concrete and masonry brick cleaning projects, basement walls and floors or foundation slabs.

HOW TO APPLY

APPLICATION INSTRUCTIONS

Note: Always shake the container well for one minute before opening the container for use.

Step 1: SURFACE PREPARATION- CLEAN EXCESSIVE EFFLORESCENCE

1. Use a wire brush to easily remove loose efflorescence. (Note: If there is a hard build-up, remove the bulk of efflorescence with the scrapper tools or a comparable tool.)
2. For removing the heavy build-up and excessive efflorescence, rub or clean the affected areas with the help of wire brush depending on the nature of substrate.
3. Once rubbing is completed clean the loosely bonded particle with water and let it dry.

Step 2: APPLICATION OF SALT CLEAN

1. Once the substrate is dry apply 1st coat of Salt Clean either with brush or by spraying as per the coverage mentioned.
2. Wait for 3-4 hr. and apply 2nd coat in cross direction (if the first coat applied horizontally then the second coat should be applied vertically and vice versa).
3. Allow SmartCare Salt Clean to penetrate deep into the surface for a minimum of 8 to 12 hours, dissolving efflorescence at the root.
4. In case efflorescence is seen again, it is recommended to apply additional coats of SmartCare Salt Clean to completely remove efflorescence.

Step 3: FINAL CLEANING OF THE SUBSTRATE

1. When the action has finished, clean the substrate with the help of wet muslin cloth or wet sponge before taking application of further painting system. Allow 2-3 hours for the surface to dry properly.

Salt Clean immediately on contact with efflorescence, it will create effervescence. It is strictly advised to wear gloves while handling Salt clean to avoid direct contact with skin.

ADDITIONAL INFORMATION

ADAVANTAGES

EASY APPLICATION

Ready to use. Brush application

DILUTION AND MIXING

No dilution recommended

TECHNICAL DETAILS

Appearance	Pale Yellow to Pale Green Liquid
pH	Less than 3
Shelf Life	1 Year
Coverage	17-20 Sq. Ft. (may vary from substrate to substrate based on surface conditions)

PRECAUTIONS

- Salt Clean is acidic in nature and should be handled with care.
- If in doubt about its effect on a material, test a small area before application.
- Avoid contact with skin. Rubber gloves and goggles should be strictly worn. Do not breathe vapor or spray.
